*This pdf might be well worth a study, and a lot better than other. It really is simplistic but excitement inside the fifty percent in the book. It became almost the custom to regard modern mathematical speculation as something having no general interest or importance; and the proposal was even made that, at least for purposes of instruction, all results be formulated from the same standpoint as in the earlier period. Such conditions were unquestionably to be regretted. This is a picture of the past. I wish on the present occasion to state and to emphasize the fact that in the last two decades a marked improvement from within has asserted itself in our Science, with constantly increasing success. The matter has been found simpler than was at first believed. It appears, indeed, that the different branches of mathematics have actually developed not in diverging but in parallel directions; that it is possible to combine their results into certain general conceptions. Such a conception is that of the function - in particular that of the analytical function of the complex variable. Another conception of perhaps the same range is that of the group, which just now stands in the foreground of mathematical progress. Proceeding from the idea of groups, we learn more and more to co-ordinate and connect different mathematical Sciences. Thus, for example, geometry and the theory of numbers, which long served to represent antagonistic tendencies, no longer form an antithesis, but have come in many ways to appear as different aspects of one and the same theory. This unifying tendency, originally purely theoretical, must inevitably extend to the applications of mathematics in other...
